

ANTIESPUMANTE

CONCENTRATED ANTIFOAM

ANTIESPUMANTE is a silicone based antifoam additive that quickly removes all types of foams in detergent washing processes due to the aeration of dissolution systems of all types of surfactants, fats, proteins and all types of organic materials.

This product can be applied to all types of systems and conduits where foam removal and control is required, suitable for use as a foam controller in the cleaning of recirculation circuits and biological and organic purification systems. It avoids the inconveniences due to the formation of soaps during the processes of fat saponification by the use of alkaline products.

DOSIAGE

Diluted in water between 10 a 100 ppm.

TECHNICAL CHARACTERISTICS

COLOUR: WHITE

ASPECT: LIQUID

SMELL: CHARACTERISTIC

DENSITY: 1,00 +/- 0,05 g/cm³

PH TO 1%: 6,5 +/- 0,5

CONTAINS AMONG OTHER COMPONENTS

15 - 30 % Antifoam Silicones

This product complies with the current legislation on Biodegradability and the Technical Sanitary Regulation on Detergents.
